

# Ayush Biswas

CEO & Founder · Software Developer · AI Engineer

hello@ayushbiswas.dev · github.com/ayushbiswas · linkedin.com/in/ayushbiswas · Kolkata, India (Remote)

---

## Summary

Founder and hands-on engineer building AI-native products end to end — from retrieval and inference systems to the product surface. Six years shipping production software; currently leading a nine-person team.

## Experience

### Founder & CEO — Sentia Labs · 2024 — Present

Founded the company, hired the first nine people, and shipped the v1 AI research platform to paying teams while staying hands-on in the codebase.

### Senior Software Engineer — Northwind Systems · 2022 — 2024

Led the data platform guild; drove a 3x ingest throughput gain and owned the reliability program end to end.

### Software Developer — Parallax · 2021 — 2022

First engineering hire. Built the core API and the internal design system that three product teams still ship on.

### Independent Developer — Freelance & Open Source · 2019 — 2021

Delivered client products across fintech and edtech; published developer tooling used in production by small teams.

## Selected Projects

**Sentia** — AI workspace turning long-form research into cited briefs. 1.2M documents indexed. TypeScript, React, RAG, Postgres.

**Nimbus Runtime** — Sub-100KB inference runtime for edge devices, ONNX to WASM. 3.4k GitHub stars. Rust, WASM.

**Pulse Analytics** — Realtime product analytics with anomaly detection in ingest. 40ms p99. Go, ClickHouse, Kafka.

**Loom Agents** — Durable multi-step agent framework with replayable state and cost accounting. Python, Redis.

## Technical Skills

**Languages:** TypeScript, Python, Rust, Go, SQL

**AI / ML:** PyTorch, LLM evaluation, RAG pipelines, fine-tuning, inference optimization

**Product & Web:** React, TanStack, Tailwind CSS, Node.js, design systems

**Infrastructure:** Postgres, ClickHouse, Kubernetes, Terraform, observability

## Leadership & Achievements

- Set technical direction and the hiring bar for a nine-person engineering team across three time zones.
- Built the founding team with zero attrition through the first year; mentor four junior engineers.
- 3.4k open-source stars; Nimbus Runtime adopted by two hardware teams for on-device inference.
- Six conference and meetup talks on practical AI systems and inference cost.
